Summary

Backend-focused Full Stack Developer with around 8 months of experience building real-time applications and backend systems using Node.js, TypeScript, Redis, React, Next.js, and MongoDB. Built REST APIs, real-time communication systems, authentication flows, and full-stack applications with a strong focus on backend development and application performance. Experience working with Docker, GitHub Actions CI/CD pipelines, and self-hosted/on-premise server deployments.

Experience

Dvika Next-Gen Tech Solutions | Full Stack Developer *Sept 2025 – Apr 2026*

- Built backend services and REST APIs using Node.js, TypeScript, Express.js, and MongoDB, improving API response times through query optimization and backend improvements.
- Developed real-time communication features using Socket.IO and WebSockets, including messaging, typing indicators, online presence, and read receipts. Used Redis caching and Redis Pub/Sub to reduce database load and support scalable real-time event handling.
- Optimized MongoDB schema design, indexing, and query optimization to improve application performance and data retrieval efficiency.
- Built authentication and authorization flows using JWT, Argon2id, and role-based access control.
- Improved deployment workflows using Docker and GitHub Actions, reducing deployment effort and improving release consistency.
- Built and maintained backend APIs and frontend modules for full-stack applications using Node.js, React.js, and Next.js.

Education

Indira Gandhi Institute of Technology | Master of Computer Applications (MCA)

- CGPA: 8.2/10
- Coursework: Data Structures and Algorithms, Computer Networks, Operating Systems, DBMS

Technical Skills

Languages: JavaScript (ES6+), TypeScript, Python, Java
Frontend: React.js, Next.js, Redux Toolkit, Tailwind CSS, Material UI
Backend: Node.js, Express.js, REST APIs, GraphQL, JWT, PASETO, Argon2id, SocketIo, Redis, RabbitMQ, Docker
Databases: MongoDB, PostgreSQL, MySQL
Tools: Linux, Git, GitHub, GitLab, Postman, Swagger UI, pnpm, monorepo

Projects

Banter – Real-Time Chat Application *Node.js, TypeScript, Socket.IO, Redis, MongoDB*

- Built a real-time chat application supporting private chats, group messaging, typing indicators, online presence, and read receipts using Socket.IO and WebSockets.
- Used Redis Pub/Sub for distributed event handling and presence tracking across multiple connections while storing chat data in MongoDB.
- Implemented JWT-based authentication and optimized WebSocket event flow for low-latency real-time communication.

WonderFest – Wedding Planning Platform *React.js, Next.js, Tailwind CSS, MERN Stack*

- Built a responsive wedding planning platform for vendor discovery, booking workflows, and event management.
- Developed modern frontend interfaces using React.js, Next.js, and Tailwind CSS with a focus on responsive UI and user experience.

- Integrated authentication and backend APIs for vendor listings, booking management, and user workflows.

Uber Clone – Ride Booking Application *MERN Stack, WebSockets, Google Maps API*

- Built a ride-booking application with JWT-based authentication, live ride tracking, and real-time driver-rider communication.
- Implemented driver matching and live location updates using WebSockets and Google Maps APIs.
- Developed backend APIs for ride management, user authentication, and trip status handling using Node.js and MongoDB.

Certifications

- Complete JavaScript and TypeScript Course – Udemy
- Complete MongoDB Course – Udemy
- MySQL Crash Course – Udemy
- Core Java Bootcamp – Udemy

Interests

- Backend Architecture, Real-Time Systems, Distributed Systems, System Design, API Performance Optimization, Self-Hosted Infrastructure, Developer Tools
- Data Structures and Algorithms Problem Solving: Actively practice on LeetCode and GeeksforGeeks, focusing on arrays, trees, graphs, and dynamic programming.
